About this Guide

This guide describes the steps detailing how to install the latest version of vFire.

- This version of the guide contains instruction for the latest version of the vFire
- software. For earlier versions of vFire Core please refer to earlier versions of the guide as outlined in the version table.

Intended Audience

This guide is written for system administrators responsible for installing vFire.

Standards and Conventions

The following standards and conventions are used throughout the guide:

	Prerequisites, including security rights and access you may need prior to completing the task. Prerequisites are also highlighted in a shaded box.
Ţ	Information related to the current topic that may be of particular interest/significance. Notes are also highlighted in a shaded box.
	Warnings. These are also highlighted in a shaded box.
Field name	Fields are highlighted in bold text.

The Maintenance Package

From version 9.4.0, you can upgrade between minor point releases (e.g. 9.6.0 to 9.6.2) by applying a **Maintenance Package**, and in doing this you will not need to run through a full patch upgrade process.

Only use the maintenance package if you are confident of the version you are currently running, and that you are only attempting to complete a minor point upgrade.

You cannot use the maintenance package to upgrade to 9.7.2, due to the nature of the fixes and enhancements introduced in this release. If you are upgrading from 9.7.2 to a higher release version, you can use the maintenance package as described below.

The steps involved are as follows:

- 1. Create a backup of the database and system files, or create a snapshot of the virtual servers.
- 2. Download the Maintenance Package from www.alemba.help.

M You will need to register to access this download.

- 3. Install the Maintenance Package.
- 4. Confirm the patch.

If necessary, you can **roll back** the maintenance package to restore a previous version.

Creating a Backup

Before installing the maintenance package you should create a backup so that the upgrade can be rolled back should the need arise.

For virtual servers

Create a snapshot or backup of the virtual web server and of the virtual database server.

For physical servers

1. Stop the vFire 9 Services. This can be done by stopping the vFire 9 Administration

		Services				×

4. Create a folder in the same location as the extracted Maintenance Package and backup the system directory (e.g.: C:\Program Files\Alemba\vFire**System1**) and the

files in the **vFire** directory.

4. Create a folder in the same location as the extracted Maintenance Package and backup the system directory (e.g.: C:\Program Files\Alemba\vFire**System1**) and the files in the **vFire** directory.

Installing the Maintenance Package

You need to download the maintenance package from www.alemba.help.

- 1. Extract the Maintenance Package to a folder on the Web Server.
- 2. Create a new folder C:\Alemba.

If you have multiple Web Servers the Maintenance Package will need to be uploaded and extracted to a folder on **each** Web Server.

3. Stop the vFire 9 Services. This can be done by stopping the vFire 9 Administrative

6. Copy all files from the LIB folder in the Maintenance Package to the vFire system's

BIN directory.

- 7. Within the **System** folder in the Maintenance Package there may be sub folders, such as **Config**, **Search** and so on. Copy all the files and folders from each of these sub folders to the corresponding folders in your vFire system directory.
- 8. Copy all files from the **System\Config** folder in the Maintenance Package to the **Config** folder of your system directory.

9. Copy all files from the **System** folder in the Maintenance Package to the vFire system directory (e.g.: C:\Program Files\Alemba\vFire**System1**).

This process will only update the files in your **existing** vFire Systems. If you wish to create new vFire Core systems at this patch level you will also need to copy the System sub folders to the **Original** directory.

10. Open the vFire Core Server Console, select the vFire Core System and then run the **Patch Database** Database Task.

0	Server	onsole - [Console	Root\Alemba vFire\vl	FireCore]		x
File Action View Favorite	s Window Help					. 8 ×
Console Root	☆ vFire	CONSOLE			Actions vFireCore	<u> </u>
▶ <u> ⊴</u> vtre€ore	General System Name System Path Default Self Service	vFireCore C:\Program Files\Al	emba\vFire\vFireCore\		System Setup Copy Files Parse Query Files Properties Database Tasks Patch Database Run Custom SQL Scrip Set System Language	Ŧ
	Database DB System DB Server DB Name DB User ID	SQL Server localhost vFire Core sa	DB NT Auth DB SSL Encrypt in Registry	No No Yes	Reporting Setup Update Reports Archiving Workflow View	→ → → ×

If you have multiple Web Servers, you will only need to Patch Database on the first Web Server you apply the Maintenance Package. On each of the other Web Servers in your environment you will need perform Steps 1 to 9, and for Step 10 you need to run the **Parse Query Files** action under **System Setup** actions instead.

- 11. Start the vFire 9 Services.
- 12. Restart the vFire Website and Application Pools (IISreset).
- 13. Analysts should clear the Local Browser Cache (CTRL+ALT+1).

Next, you need to confirm the patch.

Confirming the Patch

This is the final step in using the Maintenance Package to upgrade between minor point releases.

1. Confirm System Files have the correct Version number.

la Ir	nfra.Rules.dll Properties	x
General Security	Details Previous Versions	
Property Description File description Type File version	Value Alemba vFire Core Rules Component Application extension 9.4.5.5

to restart the console).

Rolling Back the Maintenance Package

You can roll back the maintenance package and return your system to its previous minor version:

For virtual servers

Restore the web server and database server to the snapshot or backup you took prior to applying the maintenance package.

For physical servers

1. Stop all vFire 9 Services. This can be done by stopping the vFire 9 Administration

		Services				x
